

Case Study:

TRANSMIN CONVEYORPRO

Project Overview:

Transmin has worked with this Western Australian contracting business ('the client') for a number of years, supporting them in successfully delivering their services to end users. For this specific engagement, we designed, manufactured, and supplied complete conveyor components to support their customer's completion of their Engineering, Procurement and Construction (EPC) contract in the Goldfields-Esperance region.

The Challenge:

The client's customer needed application-specific conveyor

components for their regional EPC project. Having already sold numerous capital items to the client and the project, Transmin became an obvious choice. On top of our quality service, we were able to offer convenience to the client by enabling them to procure a wide range of goods through the one trusted supplier.

The Solution:

Working closely with our Business Develop Manager for Conveyors and our dedicated Conveyor Engineer, we were able to identify and supply the best possible idlers, pulleys and belts for the project. As a distributor of Martin Engineering products, we

were also able to provide custom-designed impact beds to suit specific application requirements.

The Results:

We have supported our client and their customer to procure an extensive range of items from Transmin, as we feature across many site areas. We continue to work closely with the client to minimise costs, maximise efficiencies and optimise their processes and procedures.
